Single pin picking (SPP) is lock picking proper and is commonly what everyone refers to when they say they can pick locks. Master this technique, and you'll have access to around 90% of the world's pin cylinder locks. Our popular how-to guide contains everything you need to know to start single pin picking.

When we mentioned about lock picking in one of our earlier articles, we used a few terms like striking plate and deadlock. A few people wrote in if we could get them a picture showing which part of the lock was which, and we said well, oblige! Here is a clear lock diagram showing the first step in picking a lock is to insert the tension wrench into the keyhole and turn it in the same direction that you would turn the key. This turns the plug so that it is slightly offset from the housing around it. As you can see in the diagram below, this creates a slight ledge in the pin shafts.
